Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 3-8, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Weis (5,980,089).

Regarding claim 1, Weis discloses a method for diagnosing malfunctions of apparatus delivering goods or services against payment, of the automatic terminal type, said method comprising the steps of:

- calculating the value of at least one data item representative of the operation of said apparatus (see column 1 lines 32-35);
- comparing said calculated value to a predetermined reference value (see Figure 3); and

- deducing the occurrence of a malfunction in the event of a predetermined difference between said values (see Figure 3).

Regarding claim 3, Weis discloses a method according to claim 1, wherein said data item representative of the operation of said apparatus is the time (210) that has elapsed since the last payment made to said apparatus.

Regarding claim 4, Weis discloses a method according to claim 1, wherein said data item representative of the operation of said apparatus is the time (210) that has elapsed since the last payment made via said apparatus for each of the payment means accepted by said apparatus.

Regarding claim 5, Weis discloses a method according to claim 1, wherein said reference value is representative of the average of values taken by said data item representative of the operation of the apparatus (see column 3 lines 52-67).

Regarding claim 6, Weis discloses a method according to claim 1, wherein said reference value depends at least on a parameter such as the time of day or the apparatus concerned.

Regarding claim 7, Weis discloses a method according to claim 1, wherein predetermined difference depends at least on a parameter such as the time of day or the apparatus concerned (see Figure 1).

Regarding claim 8, Weis discloses a method according to claim 1, wherein the operations of calculating a data item representative of the operation of said apparatus and comparing the calculated value and a predetermined reference value are effected directly by said apparatus (see Figures 1 and 3).

Regarding claim 10, Weis discloses a method according to claim 1, wherein said apparatus is a terminal for paying for parking spaces, such as a parking voucher dispenser or a parking meter.
